# 1. Introduction

Finding trusted service providers can be difficult. Many people struggle with unreliable workers, unclear pricing, and security concerns. Locallinker solves this by offering a secure platform where customers can easily find, book, and pay for verified professionals.

## 1.1 Project Overview

Locallinker is an AI-powered Local Service Management System designed to connect customers with verified service providers for home repairs, cleaning, electrical work, and other professional services. The platform ensures a secure and seamless service booking experience by integrating real-time communication, AI-driven recommendations, secure payments, and identity verification. It aims to enhance trust, convenience, and efficiency in local service transactions while providing a structured and fraud-free marketplace.

### Requirements as a user story

Customers in need of reliable service providers can register and authenticate themselves through a secure sign-up and login process. Once logged in, they can browse available service providers based on location, ratings, price, and category. After selecting a provider, they can confirm bookings, choose a suitable date and time, and proceed with secure payment using multiple options, including online transactions and OTP verification. Real-time tracking and communication allow customers to interact with providers before service delivery. Once the service is completed, customers can rate their experience, leave feedback, and report any issues, ensuring accountability and continuous platform improvement.

Service providers must register and submit verification documents before listing their services. After admin approval, they can manage bookings, update availability, and receive real-time notifications. Providers benefit from an AI-powered recommendation system that increases visibility based on performance, customer ratings, and demand trends. They can chat with customers, respond to inquiries, and track their service history for better management.

Administrators are responsible for verifying service providers, approving or rejecting applications, and ensuring compliance with platform policies. They monitor system activity, detect fraudulent behavior, and take necessary actions to maintain platform integrity. By generating insights and reports on service trends, user behavior, and platform performance, administrators ensure a secure and efficient service environment.

Locallinker provides a trustworthy, scalable, and user-friendly service booking experience, benefiting customers, service providers, and administrators alike.

## 1.2 Purpose and Scope

In today's digital landscape, finding reliable local service providers remains a challenge due to trust issues, inconsistent service quality, and lack of proper verification. Locallinker addresses these concerns by offering a secure, AI-powered platform that connects customers with verified professionals, ensuring seamless and trustworthy service interactions.

**Purpose:** The purpose of Locallinker is to create a smart, efficient, and fraud-proof digital marketplace for local services. Many customers struggle to find reliable, skilled, and verified service providers due to unregulated markets, lack of trust, and security concerns. Similarly, many service providers lack visibility and struggle to connect with potential clients. By providing a centralized platform with AI-driven recommendations, secure payments, and verified professionals, Locallinker enhances trust, improves accessibility, and ensures a seamless interaction between customers and service providers.

### **Scope:**

- User authentication and role-based access (Customer, Service Provider, Admin)
- Real-time chat and booking system
- AI-based recommendation engine
- Secure OTP-based payments
- Review, rating, and feedback system
- Admin panel for monitoring and reporting
- Service provider verification & fraud detection

## 1.3 Stakeholders

A successful service marketplace depends on multiple stakeholders who contribute to its functionality, security, and growth. Locallinker brings together customers, service providers, administrators, developers, and investors to create a reliable, efficient, and scalable platform that ensures seamless service transactions and long-term sustainability.

### **Primary Stakeholders:**

- **Customers:** Individuals who need on-demand services such as cleaning, electrical work, plumbing, and more. Their primary concern is finding skilled, trustworthy professionals with transparent pricing and reviews.
- **Service Providers:** Skilled professionals looking for a structured and reliable platform to connect with clients. Their focus is on getting verified, managing appointments efficiently, and ensuring timely payments.

### **Secondary Stakeholders:**

- **Developers:** Responsible for building, maintaining, and optimizing the platform, ensuring security, scalability, and performance while implementing key features like secure payments.
- **Administrators:** Responsible for verifying service providers, managing fraudulent activities, ensuring compliance, and analyzing platform performance to improve reliability.
- **Investors & Business Owners:** Interested in the platform's growth, monetization model, and user adoption rate, ensuring its long-term success in the market.

## 2. Requirements Engineering Process

The requirements engineering process is essential in defining system functionalities, technical needs, and quality attributes based on user expectations. This section outlines the identification of key stakeholders, insights from stakeholder interviews, and finalized requirements necessary for developing a robust and scalable service management system.

### 2.1 Stakeholder Needs & Analysis

Understanding the needs of different stakeholders is crucial to designing a user-centric, secure, and scalable service platform. By identifying primary and secondary stakeholders and conducting structured interviews, we have gathered key insights into their expectations, challenges, and requirements. These findings help shape the system's features, ensuring an efficient and trustworthy service experience.

#### Identification of Primary and Secondary Stakeholders

- **Primary Stakeholders:** Customers, Service Providers.
- **Secondary Stakeholders:** Administrators, Investors, Business Owners, Developers

#### Requirement Elicitation Methods:

To accurately define system requirements, we used stakeholder interviews as the primary elicitation method. We conducted interviews with 7 persons (Including Students and Faculty members) who represented potential users of the platform including customers. These interviews helped us understand user expectations, common pain points, and essential features required for a seamless service experience.

## Stakeholder Interviews & Analysis

### Findings from Customer Interviews:

1. **Trust & Security:** Customers prefer verified professionals with identity validation.
2. **Service Availability:** Users want an easy way to find available professionals with clear schedules.
3. **Booking & Payments:** Many users are concerned about fraud in payments and want secure transactions.
4. **Communication:** Customers expect real-time chat or call support for better coordination with providers.
5. **Reviews & Ratings:** A system that allows honest feedback and ranking of providers is crucial for trust.

**Observation:** Researching similar platforms (e.g., Sheba.xyz).

## 2.2 List of Requirements

To ensure a seamless, secure, and efficient service booking experience, the system must fulfill both functional and non-functional requirements. These requirements are derived from stakeholder needs, ensuring the platform is user-friendly, scalable, and secure. Additionally, advanced features, known as wow factors, enhance user engagement and platform reliability.

### Functional Requirements (FRs)

1. **User Management** – Secure registration, login, and authentication.
2. **Service Discovery** – Search, filter, and browse service providers.
3. **Booking System** – Schedule, modify, and cancel bookings.
4. **Payment System** – Secure transactions with multiple options and OTP verification.
5. **Real-time Communication** – Integrated chat and notifications.
6. **Admin Oversight** – Provider verification, fraud detection, and compliance monitoring.

### Non-Functional Requirements (NFRs)

1. **Security & Privacy** – Data encryption, secure authentication, and fraud detection.
2. **Performance & Scalability** – Optimized for high concurrent user handling and low response time.
3. **Usability & Accessibility** – Intuitive UI, responsive design, and ease of use.

4. **Reliability & Availability** – High uptime, fault tolerance, and continuous system monitoring.

### **Extraordinary Requirements (Wow Factors)**

- **AI-driven Smart Matching** – Recommends service providers based on past ratings and preferences.
- **Live Tracking of Service Providers** – Ensures customer safety and transparency.
- **Real-Life Payment System** – Integrated with real-world payment gateways for seamless transactions.

## **2.3 House of Quality (QFD Integration)**

The House of Quality (QFD) framework is used to align customer expectations with technical requirements, ensuring that the system meets user needs efficiently. By mapping Customer Requirements (CRs) to Engineering Requirements (TRs), this process helps prioritize system features and optimizations that directly enhance user experience, security, and performance.

### **Customer Requirements (CRs) List**

1. **Fast and Secure Authentication** – Ensures users can log in quickly with minimal security risks.
2. **Reliable and Verified Service Providers** – Prevents fraudulent providers and enhances user trust.
3. **AI-driven Service Recommendations** – Suggests personalized service options based on user feedback.
4. **Seamless Booking and Payment** – Ensures a hassle-free service confirmation and secure transaction process.
5. **Real-time Communication and Support** – Provides instant chat and support channels for user convenience.

### **Engineering Requirements (TRs) List**

1. **Implement Secure Authentication System** – Multi-factor authentication and encrypted login.
2. **Develop Provider Verification Module** – Automated background and identity checks.
3. **AI-powered Recommendation System** – Machine learning-based service suggestions.
4. **Integrated Payment Gateway** – Secure transactions with multiple payment options.

5. **WebSocket-based Real-time Communication** – Instant messaging and notification system.
6. **AI-driven Dispute Resolution Module** – Automated customer dispute resolution system.

### QFD Matrix (House of Quality)

| Customer Requirements (CRs)             | Engineering Requirements (TRs)                                        | Relationship mapping |
|-----------------------------------------|-----------------------------------------------------------------------|----------------------|
| Fast Secure Authentication              | JWT-based login, OAuth, and role-based access control                 | Strong               |
| Seamless Searching                      | Scalable Search Engine with AI-based Ranking                          | Strong               |
| Reliable and Verified Service Providers | AI-powered Provider Verification Module                               | Medium               |
| AI-driven Service Recommendations       | Machine Learning-based Recommendation System (Random Forest, XGBoost) | Medium               |
| Seamless Booking and Payment            | User-friendly design & UX optimization                                | Strong               |
| Real-time Communication and Support     | Secure Integrated Payment Gateway with Multi-factor Authentication    | Medium               |
| Real-time notifications                 | Secure Integrated Payment Gateway with Multi-factor Authentication    | Strong               |
| Integrated video/audio interview        | WebRTC-based interview system                                         | Strong               |
| Employer dashboard for job management   | Custom-built dashboard with filtering and analytics                   | Medium               |

## 3. Requirements Modeling

To visually represent the system's functionality, user interactions, and process flow, we use use case diagrams, activity diagrams, and prototyping through wireframes or UI sketches. These models help in understanding user roles, interactions, and system behavior, ensuring a well-structured and user-friendly design.

### 3.1 Use case diagrams

Use case diagrams illustrate the various interactions between users (customers, service providers, administrators) and the system. They define the system's primary functions and how different stakeholders interact with them.

In the LocalLinker system, the three key actors—Customer, Service Provider, and Administrator—can be categorized as Primary and Secondary Actors based on their interactions with the system.

#### Primary Actor:

A Primary Actor is an entity (user) that directly interacts with the system to achieve a goal. They initiate use cases, meaning their actions drive the system's core functionalities.

- **Customer** → The main user of the platform, responsible for browsing services, making bookings, making payments, and providing feedback.
- **Service Provider** → Uses the system to list services, accept bookings, communicate with customers, and manage schedules.

#### Secondary Actor:

A Secondary Actor is an entity that supports the primary actor in achieving their goals but does not initiate the main interactions. They assist in system processes.

- **Administrator** → Plays a supporting role in ensuring the system runs smoothly. The administrator monitors activities, verifies service providers, manages disputes, and ensures compliance with platform policies but does not directly initiate transactions like customers or service providers.

## Use Case of Project Diagram

| Level 0     | Level 1             | Level 2                               |
|-------------|---------------------|---------------------------------------|
| LocalLinker | Authentication      | Register as service provider          |
|             |                     | Sign up as customer                   |
|             |                     | Sign in                               |
|             |                     | Sign out                              |
|             |                     | Manage account                        |
|             | Service Browsing    | View service categories               |
|             |                     | Search by Location                    |
|             |                     | Search by Price                       |
|             |                     | View Service Details                  |
|             | Booking             | Confirm Date & Time                   |
|             |                     | Confirm Booking                       |
|             |                     | Cancel Booking                        |
|             | Payment             | Select Payment Method                 |
|             | Review and Feedback | Rate Customer                         |
|             |                     | Rate Service Provider                 |
|             |                     | Leave a Comment                       |
|             | Admins Oversight    | Approve/Reject Provider Registrations |
|             |                     | Add Service                           |
|             |                     | Remove Service                        |
|             |                     |                                       |

|  |                     |                                                 |
|--|---------------------|-------------------------------------------------|
|  |                     | Update Service                                  |
|  |                     | Verify documents credentials                    |
|  |                     | Track user and provider activities              |
|  |                     | Ensure policy compliance                        |
|  |                     | Analyse Reviews                                 |
|  |                     | Reports on top services/providers               |
|  | Providers Oversight | Available/Unavailable Status                    |
|  |                     | Receive notifications                           |
|  |                     | View pending, confirmed, and completed bookings |
|  | Contact             | Chat                                            |
|  |                     | Email                                           |
|  |                     | Helpline                                        |
|  |                     | Follow on social media                          |
|  |                     | FQA                                             |

### 3.3 Prototyping Using Wireframes or UI Sketches

Wireframes or UI sketches serve as visual blueprints for the platform's interface. They outline the layout, navigation, and functionality of key features like the home page etc.

**These are our LocalLinker Project's Wireframes:**

❖ **Homepage of LocalLinker Website** →

## ❖ For Authentication For Customer And Service Provider

After Clicking SignUp As Customer  
This Form Will Display->

A screenshot of a web application's 'Sign Up' form. The form is titled 'Sign Up' and is set against a background with a large orange 'X' icon. It contains several input fields: Name, Email, Phone, Password, Street, Zip Code, State, and City. A dark blue 'Sign Up' button is at the bottom of the form. The website's navigation bar is at the top, and the footer contains copyright information and links to 'About Us', 'Contact', and 'Privacy Policy'.

After Clicking Register As Service Provider  
This Form Will Display->

A screenshot of a web application's 'Register as a Service Provider' form. The form is titled 'Register as a Service Provider' and is set against a background with a large orange 'X' icon. It contains several input fields: Provider Name, Category (a dropdown menu), Price (USD), Service Description, Provider Location, Gender (a dropdown menu), Email, Password, Phone, Present Address, and Permanent Address. A dark blue 'Register' button is at the bottom of the form. The website's navigation bar is at the top, and the footer contains copyright information and links to 'About Us', 'Contact', and 'Privacy Policy'.

## **Appendix:**

### **Question List Ask For Interview From Customers**

- 1.What features would make service booking and management easier for you?
- 2.What verification process would make you trust a customer?
- 3.How do you feel about data privacy and secure login methods?
- 4.What payment methods do you prefer for service transactions?
- 5.Would you prefer a platform that ensures identity verification before transactions?
- 6.Would you like a real-time chat or call feature with service providers?
- 7.How do you expect notifications and updates about bookings and payments?
- 8.How important are ratings and reviews when selecting a service provider?
- 9.Would you like to give feedback after a service is completed?
- 10.Would you find an AI-based recommendation system useful for selecting services?
- 11.Would live tracking of service providers be a valuable feature?
